RIFLES

The RAREST GUN OF THE WORLD

**ROTARY**410 OVER AND UNDER SHOTGUN,
410/208 WIN SHOTGUN/RIFLE COMBO
ROTARY ROUND ACTION

Rotary Round Action

The clean lines and simplicity of all functions in ERMOX' Ultralight Rotary Round Action gun camouflage the creativity and elaborate engineering involved in its creation.

TECHNICAL SPECIFICATIONS:

Operation System	: Rotary Round Action
Caliber	: .410ga O/U Shotgun + .410/.308 WIN O/U Rifle Combination
Chamber	: 76 mm / 3"
Receiver	: 4140 Steel,(Solid/Drilled Material Processing)
Barrel	: 4140 Steel,(Solid/Drilled Material Processing)
Length of Barrel	: 24"/28"
Buttstock	: Graded Turkish Walnut/Laminated
Coating	: Chrome, Nickel, Cerakote, Camouflage
Capacity	: 2
Choke Options	: Mobile Choke Set
Weight	: 3 pounds
Overall Length	: 40,31"

ROTARY

400 OVER AND UNDER SINGLE-GUN,
410/200 With SHOTGUN/RIFLE COMBO
ROTARY BOUND ACTION

The sharp edges of the flat-sided action bar are sculpted with a gentle radius that blends smoothly into the similarly rounded grip and forend. The upshot is a graceful-looking gun that rides more comfortably in the hand when carried at its balance point.

I keep calling this a gun instead of rifle because it's both. And more. ERMox can build it as an over-and-under rifle, as a shotgun or as a combination. The rifle can house any rimmed centerfire up to 450 Nitro Express or any rimfire.

Given the perfectly cylindrical, unencumbered receiver on this unique gun, "turned out" is exactly the right phrase describing how it is made. It's turned elegantly on a lathe with no protruding handles, knobs, levers or switches. It's the gun world's ultimate example of form following function. But "turned" also describes its function.

To open the action and expose the chambers for loading, twist the barrels a quarter-turn right. This disengages the two massive locking lugs. Push forward about an inch to expose the hinge plate. The barrels now hinge down at about a 45-degree angle. Drop in two cartridges, raise the barrel, push together and turn to the left. Done!

Simplicity and durability.

Traditional break-action doubles pivot around a hinge pin below the axis of the bores. Upon firing, expanding gases create the well-known Newtonian reaction to the action. The barrels leap forward, away from the face of the breech, but their linear motion is interrupted by the under-lug, which pivots around the hinge pin. Breech and barrels spring apart ever so slightly.

Internally, the action is equally simple and nearly foolproof. The tiny firing pins are driven by strikers powered by coil springs, and all pieces are in a straight line behind the bores. You can dry-fire the gun as often as you want with no ill effects.

The safety directly engages the strikers, holding them back regardless of what the triggers do. Sear and striker engagement provide so much mechanical advantage that the double triggers can be set to break crisply with minimal pull weight. I can vouch for that.

Unloading the gun after firing is dead simple. Merely rotate the barrels again, pull the receiver back one inch to expose the hinge pin and tip the gun upside down while hinging it open. Massive extractors engage half of each cartridge's rim to push them far out of the chambers, at which point gravity pulls them away. Turn the gun upright, drop in two fresh rounds, push the receiver and barrel together, turn it a quarter-turn left, and you're ready to shoot again.

The whole operation, like the gun itself, is a beautiful thing.

Much of that beauty accrues from the marbled walnut chosen for the stock, precise hand-checkering and perfect wood-to-metal fit. The English scroll engraving on the barrel breech, action tang, trigger bow, hinged grip cap and barrel quarter-rib is done by ERMOX.

Additional touches on the rifle included a flip-over front-sight hood (spare under the grip cap,) barrel-mounted sling stud, shadow-line cheekpiece, and integral quick-release scope mount that facilitates removal and replacement in a second without loss of zero.

The clean lines and simplicity of all functions in the Rotary Round Action camouflage the complicated creativity and elaborate engineering involved in its creation, final testament and compliment to its inventor. Your odds for finding a ERMOX Rotary Round Action gun of any type on a store shelf are none.

4140 Steel, (Solid/Drilled Material Processing) Receiver,
4140 Steel,(Solid/Drilled Material Processing) 24"/28" Barrel,
Exact Grade 3 Turkish Walnut Stock,
Ultralight! Only 3 Pounds,

LR-500

22 LR

The 22LR folding gun presents an excellent option for hunting, survival, or recreational shooting enjoyment. Currently available in .22lr, 20ga/.22lr and 410ga/.22lr options, 22LR combines the aesthetic and functional qualities of an over-and-under shotgun, featuring an appealing wood buttstock made of Turkish Walnut and handguard, all while offering the versatility of a rimfire cartridge. Each barrel operates independently, triggered separately, and is managed by a convenient top tang safety for quick and reliable use.

The LR22 is offered with either an upper rib or a Fiber Optic front sight, along with various rear sight choices and a Picatinny rail for optic attachments. Engineered for portability, the LR22 can be folded in half by pushing down the trigger guard, resulting in a compact overall length of approximately 21", facilitating easy storage and transport.

TECHNICAL SPECIFICATIONS:

Operation System	: Lever Action Combination
Caliber	: 22LR -410 GA • 22LR -22LR • 22LR -20 GA • 20 GA -410 GA • 410 GA -410 GA
Chamber	: 76 mm - 3"
Receiver	: 7075 Aluminum
Barrel	: 4140 Steel.(Solid/Drilled Material Processing)
Length of Barrel	: 48 - 50 cm (19" / 20")
Buttstock	: Turkish Walnut
Coating	: Chrome
Capacity	: 2
Choke Options	: Stable Choke
Weight	: 4 - 5 Pounds
Overall Length	: 36" - 37 "

22 LR PUMP ACTION

22 LR PUMP ACTION

22 LR PUMP ACTION

The 22 LR Pump Action Rifle is crafted with Buckhorn front and rear sights and a sleek polished appearance. This rifle, operating on a pump-action mechanism, has a 15-round capacity and is equipped with a cross-bolt safety.

TECHNICAL SPECIFICATIONS:

Operation System	: Pump Action
Caliber	: 22 LR
Chamber	: 76 mm - 3"
Receiver	: 7075 Aluminum
Barrel	: 4140 Steel,(Solid/Drilled Material Processing)
Length of Barrel	: 45,72 cm (18")
Buttstock	: Graded Turkish Walnut
Coating	: Polished Finish
Capacity	: 15
Choke Options	: Stable Choke
Weight	: 5,25 Pounds
Overall Length	: 36"
