# XPA-12 SERIES

XPA-12 offers both semi automatic and pump action operations on a single shotgun. This means, you will have both a semi automatic and a pump action shotgun at the same time.

XPA-12 is a 12 gas operated shotgun with a 76mm (3") chamber.

This shotgun will cycle with any load from 24 grams (7/8 OZ) to heavy magnums.

On semi automatic mode, this shotgun operates like any other gas operated shotgun and on pump action mode, you cycle it manually.

There are 2, 5 and 10-round magazine options depending on your needs.

Ergonomics and modern design moves it ahead of the competitors.

Designed and manufactured as a result of long R&D work, ERMOX XPA-12 semi automatic and pump action magazine fed shotgun aims to offer maximum quality and pleasure that can be offered by a shotgun.

## **XA-4** SERIES

ERMOX XA-4 Tactical Semi-Automatic Shotgun features Auto-Regulating Gas-Operated (ARGO) system: a simple, self-cleaning, piston-driven action. The unique, short-stroke, dual-piston design has a gas ported located just forward of the chamber, resulting in less fouling and more reliable cycling. Pistons push directly against the bolt, for faster operation and minimal vibration. This eliminates any extra weight from any connecting linkages or heavy action bars under the forend. The result: Marine-tough reliability, for the harshest environments.

A black synthetic collapsible stock features a textured pistol grip. The 18-1/2" barrel includes an adjustable ghost ring rear sight, and fixed blade front sight, plus standard M choke tube. A picatinny rail awaits your optics (not included). The drilled and tapped receiver is ready for the elements, in an anodized black finish.

# TAC-4 SERIES

Ermox pump-action shotguns have been proven in some of the worst conditions on earth. Also known as slide action shotguns, they feature a mechanical action connected to a sliding grip under the barrel. After each shot, the pump is cycled back and forward to eject the spent shell and chamber a new one. With the TAC-4, the safety is disengaged efficiently, without having the trigger finger travel anywhere but from the receiver to the trigger. The only lag time is the time that it takes to bring the shotgun to target and to focus on the sight.

# XSHOT-4 SERIES

Made by the talented engineers of Ermox Defense, the XSHOT-4 is lighter, faster and more ergonomic than ever. The 4140 steel, the chrome used on the outside and inside are making the barrel very wear-resistant and offer excellent protection against rust and pitting. The XSHOT-4 offers both tactical or stable stock options. Compensator addition promises you the lightest recoil effect ever!

ERMOX BULLPUP SERIES create a more tactical mag-fed shotgun. It's smaller overall than most shotguns on the market but packs a solid punch thanks to its ability to retain a longer barrel even with a shorter stock.

Features include an AR-platform style charging handle, adjustable cheek riser, and rails that are both Picatinny and M-Lok. The gun ships with a trio of choke tubes, removable open iron sights, and 2-5-10 round magazine. A 20-round DRUM MAGAZINE is available as an aftermarket purchase.
